

**National Interagency Coordination Center  
Incident Management Situation Report  
Friday, November 8, 2019 – 0800 MT  
National Preparedness Level 1**

**National Fire Activity (November 5 – November 7, 2019)**

Initial attack activity:	Light (194 new fires)
New large incidents:	0
Large fires contained:	4
Uncontained large fires:***	1
Area Command teams committed:	0
NIMOs committed:	0
Type 1 IMTs committed:	0
Type 2 IMTs committed:	0

Nationally, there are 6 large fires being managed under a strategy other than full suppression.

\*\*\* Uncontained large fires include only fires being managed under a full suppression strategy.

\*\*\*Changes in some agency YTD acres reflect more accurate mapping or reporting adjustments.

\*\*\*Additional wildfire information is available through the Geographic Areas at <https://gacc.nifc.gov/>

**Predictive Services Discussion:** A very consistent pattern will remain in place over the country over the next week as a very broad, cool trough of low pressure becomes further established over the eastern two thirds of the country. Temperatures east of the Rockies will generally be below average with the coldest temperatures being near the center of the trough over the Great Lakes. Periodic weak systems will impact mainly the Upper Midwest and the Great Lakes regions with occasional light snow during the period. West of the Continental Divide, the multi-month dry pattern will continue as most areas will continue to receive no precipitation. Temperatures West-wide will be about 5 to 10 degrees above average as high pressure remains entrenched along the West Coast. The expected pattern does not appear to be conducive for large scale Foehn Wind events. Given the time of year, some of the narrow valleys, and possibly the larger Columbia Basin, could fall into a period of extended temperature inversions that could produce fog episodes.

## Power Line Safety

*Miscellaneous Fireline Hazards*

Operating near or under power lines poses unique hazards, and the following precautions should be followed to reduce potential equipment damage or injury:

- If possible, the power company should deactivate lines in the fire area.
- Don't operate heavy equipment under power lines.
- Keep all aviation activity away from power lines. Inform air attack and/or other aviation resources of the location of the power lines.
- Don't drive with long antennas under power lines.
- Don't stand near power lines during retardant drops.
- Don't park under power lines. The magnetic field around energized power lines can induce an electrical charge in ungrounded vehicles or equipment. This charge can shock anyone who touches the vehicle.
- Don't apply a straight stream to power lines.
- All personnel should be cautioned that smoke may become charged and conduct the electrical current. Deactivated transmission and distribution lines may continue to pose a hazard due to induction.
- If power lines fall on your vehicle, DON'T leave the vehicle until the power company arrives. If the vehicle is on fire or fire is near, jump clear, don't hang on, keep feet together, and bunny hop away.
